SKIN TIGHTENING & SLIMMING

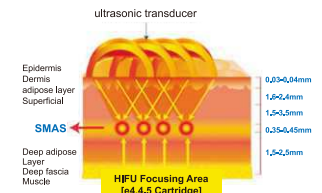

**High-Intensity Focused Ultrasound (HIFU)** can stimulate and replenish collagen in the skin, improving texture and decreasing sagging. It transfers heat energy directly to the skin and subcutaneous tissue, resulting in facelift or body lift results without using invasive surgery or injections. This treatment has no downtime, which is an additional benefit and can be applied on the face and the entire body. Unlike lasers and powerful pulse lights, it is also effective on people of all skin tones.

### FAT REMOVAL PRINCIPLE

High Intensity Focused Ultrasound (HIFU) directly delivers heat energy to skin and subcutaneous tissue that can stimulate and renew the skin's collagen and thus consequently improving the texture and reducing sagging of the skin. It literally achieves the results of a facelift or a body lifts without any invasive surgery or injections, moreover, an added bonus of this procedure is that there is no downtime. This technique can be applied to the face as well as the whole body, and also, it works equally well for people of all skin colours, in contrast to that of lasers and the intense pulse lights.
