The **CALYSTA** 1060nm wavelength's specific affinity for adipose tissue, coupled with minimal absorption in the dermis, allows Sculpture to efficiently treat areas of troublesome fat. Over time, the disrupted fat cell is eliminated naturally with results seen as quickly as 6 weeks.

CALYSTA is ideal for people with trouble spots, particularly those that seem resistant to diet and exercise. Most patients feel a tingling sensation intermittently throughout the treatment which is well-tolerated. Clinically proven in multisite trials in more than 100 patients with over 90% patient satisfaction rate.
