Electro Magnetic Sculpting Technology (EM Sculpt)

EMslim

Electro Magnetic Sculpting Technology (EM Sculpt)

Emslim is a combination of High Intensity Focused Electro-Magnetic (HIFEM) and Radiofrequency (RF) technologies to enhance muscle growth and reduce fat. RF heats muscles, preparing them for intense contractions similar to exercise, while fat cells are heated to trigger apoptosis, resulting in fat reduction. Clinical studies report a 25% increase in muscle volume and 30% fat reduction after just four 30-minute sessions. This non-invasive treatment can be used on areas such as the abdomen, buttocks, thighs, arms, and even pelvic muscles, improving tone and overall body shape.

How Does It Work?

-30% Fat

MORE

Mechanism Of Muscle Contraction

Nerve impulses set off a biochemical reaction that causes myosin to stick to actin

Technical Specifications

Frequency	1-150hz
RF Power	800W
Power	5000w
Intensity	7 Tesla
Screen	12.4inch tough screen
Pulse width	310µs±10%
Cooling	Air Cooling
Voltage	AC220V±10% 10A 50HZ , 110v±10% 10A 60HZ
