

Velexa

Multiplatform Slimming Technology

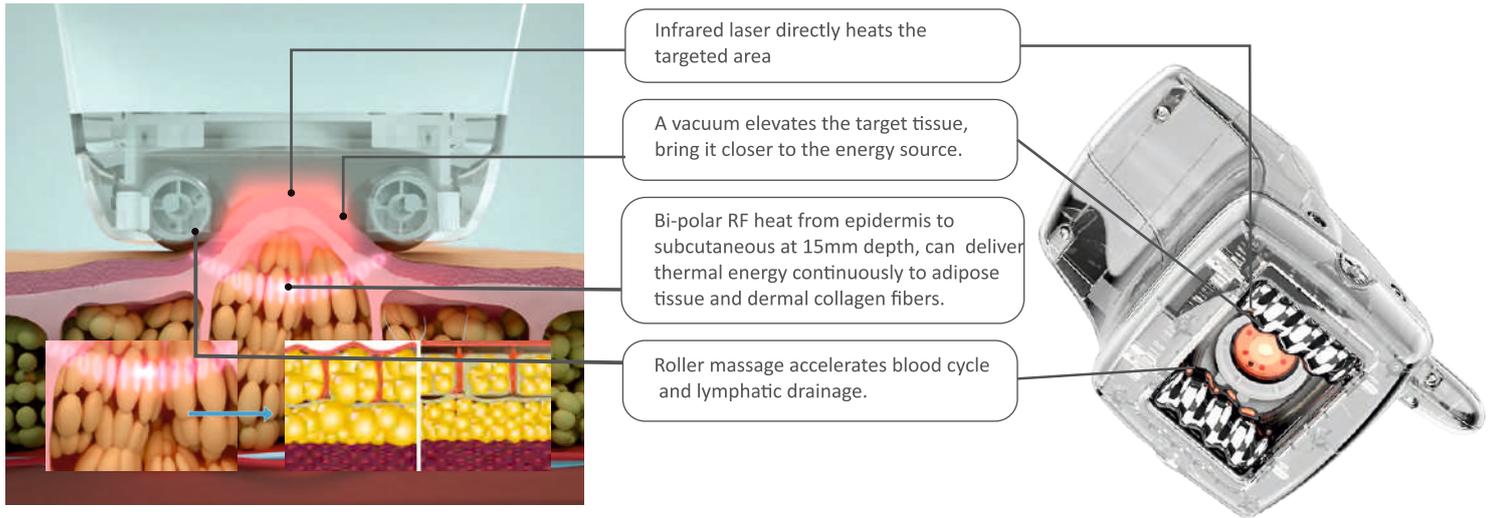

Velexa

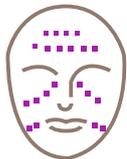

Multiplatform Slimming Technology

The Velexa system integrates five advanced technologies—infrared laser, bi-polar radio frequency (RF), massage roller, vacuum, and ultrasound cavitation—to deliver comprehensive body contouring and skin treatment solutions. By deeply heating fat cells, surrounding connective tissue, and collagen fibers, it stimulates the production of new collagen and elastin, resulting in improved skin texture, reduced laxity, and localized volume reduction. Velexa is suitable for cellulite removal, circumferential reduction, skin tightening, and facial rejuvenation. It offers safe, reliable, and effective treatments for various body areas, promoting a smoother, more contoured appearance.

How Does It Work?

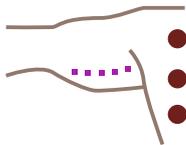

Face and Submental

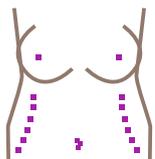

- Skin rejuvenation & skin tightening (Laxity, wrinkles, fine lines)
- Face & neck contouring (submental shaping)
- Skin resurfacing

Arms (Bingo Wings) & Back

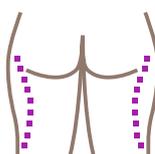

- Circumferential reduction
- Skin tightening (Laxity)
- Stretch marks

Stomach (Abdomen & Love Handles)

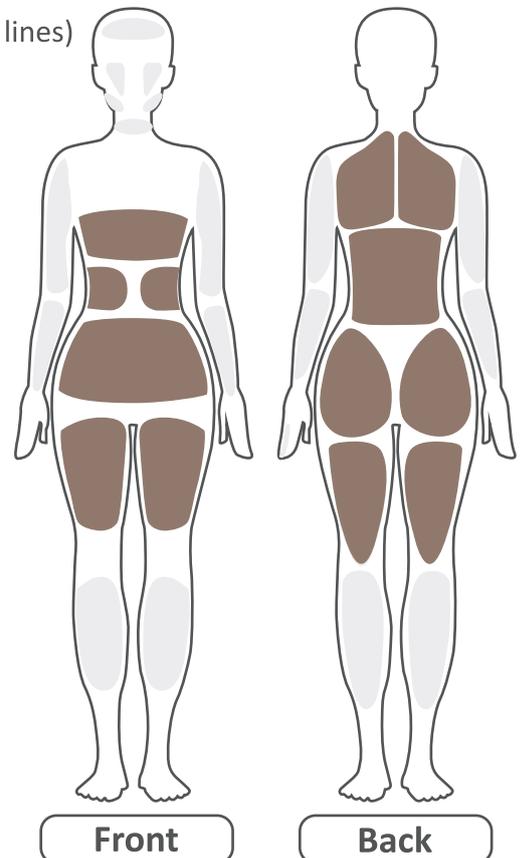

- Circumferential reduction
- Body contouring
- Skin tightening (Laxity)
- Stretch marks (red and white)

Legs (Thighs & Buttocks)

- Circumferential reduction
- Cellulitis treatment
- Body contouring
- Skin tightening

Technical Specifications

Model Number	Velexa
RF Power	800W
RF Frequency	2 MHz
Infrared Laser Power	20W
Infrared Laser Wavelength	940nm
Ultrasound Power	200W
Vacuum Intensity	10-90Kpa
Dimensions	532mm x 537mm x 1130mm
Weight	50kg

Infrared Vacuum Roller
RF Handle (Big)

Infrared Vacuum
Roller RF Handle (Small)

Facial Vacuum RF Handle

Vacuum Ultrasound
Cavitation Handle
